

Use Whiteley Industrial's High Performance Hard Floor Systems

Insist on **Whiteley Industrial** when ordering your hard floor products

Benefits:

- Ultra high gloss levels
- Reduce scuffing on floors
- Tough durable finish
- Low maintenance & easy application
- Non yellowing & resists discolouration
- World leading R&D in high gloss hard floor finishes

Whiteley Industrial's Hard Floor Systems are designed to withstand the rigours of high traffic and extended trading hours while also offering spectacular finish results. All products in the Hard Floor Systems have been exhaustively tested under an extensive array of Australian environmental conditions to ensure professional results every time. For a product demonstration please contact Whiteley Industrial marketing@whiteley.com.au.

GLAMOUR TERRAZZO SEALER

Provides a tough and durable finish, excellent gloss and outstanding depth. Excellent levelling characteristics allowing for an even finish with minimal effort. Hard wearing for high traffic areas. Scuff, mark and abrasion resistant. Easy application and fast drying.

SYNERGY

High gloss vinyl sealer/finish. Superior gloss levels, high performance resistance against dirt, scuff and black marks for high traffic areas. Easy application and maintenance. Excellent for use on vinyl, can also be used terrazzo, granite, tiles and slate.

FLOOR SEALERS

BRILLIANCE

High gloss sealer/finish. Quick drying and extremely durable. One-step system for vinyl. Provides the perfect finish for Impact Base Sealer on vinyl. Low and high speed burnishable from 250-2000 rpm.*

IMPACT

Low maintenance, high gloss base sealer. UV resistant semi-permanent sealer for use on vinyl, stone, tiles, terrazzo and concrete. Has excellent levelling properties and is resistant to scratching and scuffing.*

THERMAGLO PLUS

Vinyl, terrazzo and timber finish. Burnishable from 250-2000 rpm. May be used as a one-step sealer and finish. Easy to use and most reliable for any situation. Provides wet look gloss.*

**Sealer slip resistance rating D1 classification as per AS 4586:2013*

ZIP STRIP

Fast acting butyl stripper, low odour, caustic and residue free, liquefies old sealers on contact. Zip Strip quickly liquefies and suspends the sealer in a liquid emulsion which is easily removed with an autoscrubber or mop and bucket

XPOLY8

A powerful dual action floor stripper designed to rapidly liquefy old sealers on contact. XPOLY8 is a low odour, fast acting, labour saving method for removing floor sealers and finishes with a minimum of scrubbing.

TEMPO HD

Heavy duty neutral detergent. Suitable for cleaning all types of floors and surfaces. Low foaming formula. Provides high performance cleaning to keep sealed floors like new.

REJUVEN8

A neutral multi-purpose cleaner & maintainer designed to enhance the appearance of worn floor finishes. Increases the durability of floor finishes and enhances gloss levels. Effectively repairs scratches and reduces the appearance of scuffing - black heel marks, grounded in dirt and surface scratches.

GLOKLEEN

Multipurpose neutral cleaner-maintainer for use on sealed and unsealed floors. Increases gloss and improves durability and wear.

Hard Floor Maintenance wall cleaning chart is available to download from www.whiteley.com.au

• I have a slip problem on my floor, what should I do?

Clean the floor thoroughly using Tempo HD and if possible while still wet scrub the floor using a buffing machine with a blue pad. Remove the solution with a clean mop. Allow the floor to dry and then buff again using a clean red pad until the floor surface is clear. Recoat the floor surface with two light coats of Brilliance (use a dedicated polish mop and bucket).

• Are your products slip resistant?

Yes! Whiteley hard floor sealers are slip resistant according to A/NZS4663. Regular use of Rejuven8 or Glokleen in your maintenance schedule will also increase floor grip.

• What is the best maintenance schedule for a sealed floor?

Daily: Sweep floor

Alternate Days:

> (4-5 days/week) Mop or scrub floor with Tempo HD & then buff.

> (2-3 days/week) Mop or scrub floor with Rejuven8 and then buff. This provides extra wear and durability to the floor finish while also increasing slip resistance.

Yellow floors are a typically an indication that you may be either using too much maintainer, or the polish is getting old and worn, especially in areas of high traffic. It is suggested that you either wash off the old maintainer, or strip and reseal to bring back the gloss to your floor.

• What's this flaky powder residue on my floor?

Irregularity in the floor polish finish is uncommon and can be detected within days of the sealer being laid. This could be because the pH is an issue, or the conditions are too cold or too humid. It is advised that if you live in colder regions of Australia that you plan to seal your floor in the warmer months of the year.

• Why does my floor look dull and scuffed?

General wear and tear caused by the rigours of daily traffic will naturally degrade the quality of the polish over time. Rejuven8 should be used in your maintenance schedule as it will replenish and protect the surface of your floor.
